B
```

present invention relates to novel Streptomyces aizunensis (NRRL B-77) polyketide synthases and their coding sequences for polyene yketide production. The polyketides are useful as fungal growth ibitors and cancer cell growth inhibitors. The present sequence is a contig which comprises thirty Open Reading Frames (ORFs), encoding yketide synthases and related proteins. 21253 A; 59641 C; 58859 ဝ 24298 T; 0 Ç, 0 Other, 9

                                                                                                                                                                                                          The invention relates to an isolated, purified or enriched nucleic acid which can be used for the production of a polyketide. The nucleic acid concodes at least one domain of the polyketide synthase system formed by the polyketide synthases of AEB86867, AEB86867, AEB86871, AEB86871, AEB86871, AEB86873, AEB86874, AEB86874, AEB86874, AEB86874, AEB86874, AEB86874, AEB86876, AEB86870, AEB86872, AEB86874, AEB86876, AEB86876, AEB86870, AEB86872, AEB86874, AEB86876, AEB86870, AEB86873, AEB86876, AEB86876, AEB86870, AEB86872, AEB86874, AEB86876, AEB86876, AEB86882; (2) an isolated, purified acid concilic acid concilicated polypeptide for the committed under IDAC accession no. 250203-01, 250203-02, AEB86876, AEB86876, AEB86882; (3) an isolated polypeptide for the production of a polyketide, for use as a fungal and cancer cell growth conhibitors. The present sequence represents a Streptomyces aizunensis colypens polyketide synthase related contil 2 DNA sequence, which is used in the accentification of the production of the production of a polyketide synthase related contil 2 DNA sequence, which is used in the accentification of the production of the polyketide synthase related contil 2 DNA sequence, which is used in the accentification of the production of the polyketide synthase related contil polyketide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S

The invention relates to an isolated, purified or enriched nucleic acid which can be used for the production of a polyketide. The nucleic acid encodes at least one domain of the polyketide synthase system formed by the polyketide synthases of AEB8662, AEB8664, AEB86666, AEB86668, an isolated, purified or enriched nucleic acid for the production of a polyketide of Formula I comprising a nucleic acid selected from the group consisting of AEB8663, AEB86665, AEB86667, AEB86673, AEB8667
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                           of macrolides by microorganisms. In particular it relates to the nucleic acids forming the biosynthetic locus for rosaramicin (a 16-member macrolide antibiotic) from Micromonospora carbonacea. The invention is useful for the biosynthesis of macrolides by microorganisms. It allows direct manipulation of macrolides and related chemical structures by chemical engineering of the proteins involved in the biosynthesis of rosaramicin. It is useful to catalyse certain biochemical reactions, in tire or in vivo, to direct or enhance the synthesis or modification of polyketide, polyketide substrate or its precursor. The present sequence is M. carbonacea polyketide synthase (PKS) type I gene. (Updated on 27-corr-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                  Novel isolated polypeptide involved in biosynthesis of macrolides microorganisms, useful for biosynthesis of macrolides by microorgy preferably for biosynthesis of rosaramicin.

These enzymes are required for the biosynthesis of leptomycin, and are selected from LepA, LepB, LepC, LepD, LepF and LepF. The leptomycin PKS polynucleotides are useful for producing polyketides, leptomycin and leptomycin analogs and derivatives. The present sequence represents a leptomycin PKS gene cluster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 67167 BP; 7789 A; 22625 C; 26887 G; 9866 T; 0 U; 0 Other;

The genes, proteins and antibodies provided by the invention also can be used to seek and develop compounds and proteins which can be used in medicine, industry and agriculture. The present sequence is that of the Streptomyces nanochangensis nanoligomycin gene cluster of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Published_Applications_NA_Main:*
